MICNOVA Sensor Cleaning Brush MQ-MB100

Code: M-3005

During the daily use of D-SLR and Mirrorless cameras, the sensor is inevitably exposed to the atmosphere, especially when changing lenses. As a result, dust and other matter in the air land on the sensor. To get clear, dust free photos, these particles must be removed by a proper sensor cleaning device. We developed the **MICNOVA** Sensor Cleaning Brush to help remove these particles from a sensor. Our brush is equipped with a rotary motor which produces a spinning action, that serves two purposes: to create a static charge on the bristles that will be used to attract the dust off of the sensor surface and to clean the brush by dislodging any previously picked up particles. Our brush has four super bright LED lights surrounding the brush to allow the user to see clearly while doing the cleaning..

Features:

1. Three-positioned power switch (off, spin, and lights)
2. Equipped with 4 super bright LED lights
3. Powered by 2 AAA batteries (not included)
4. Equipped with super thin fibers
