

Seagull – Video-light DV-320

Seagull DV-320 portable LED video-light with adjustable colour temperature

The light head comes with an impressive 320 super-bright LED bulbs in two colour temperatures to give plenty of illumination. An on-board on/off slider switch and a rotary temperature control give you complete control of your light. A diffuser filter is also included with the light and simply clips on to the front of the unit.

The DV-320 can be either stand or camera mounted and has a built-in standard sized cold-shoe on its base (this also has a 1/4in tripod thread in its base). To give the light extra flexibility there is also a tilting ball and socket head included. This enables the light to be angled where it is most needed.

Code: R-1410 A truly illuminating experience
