## Kelda – 500 f6.3 Manual Focus Telephoto Lens

**Code: A-2002**

This well constructed high quality multicoated mirror lens is ideally suited for wildlife and sports photography, being virtually flare free. With the T2 fitting the lens can be mounted on most APS-C and full frame cameras using a suitable adaptor.. The fixed f6.3 aperture means that the lens can only be used in either Manual (M) or aperture priority (A) modes. The very smooth focusing is facilitated by a wide rubber grip on the lens barrel. The lens is supplied with a soft lens pouch.
