

Kelda – 6.5mm f3.5 Manual Focus Ultra Fisheye Lens

Interchangeable Lens for most DSLR Cameras

Code: **A-2003** CANON **A-2004** NIKON

The KELDA Ultra Fisheye Lens is an excellent addition to any photographer's collection.

The special fisheye design allows maximum creative expression.

Corrects aberrations using a complex aspherical lens. When fully opened, it produces both high resolution and contrast at the centre of the lens, as well as around the periphery.

Used with an APS-C (1:1.5x) image sensor DSLR the 180deg. angle of view of the lens can be used to create amazing image expressions that cannot be seen by the human eye such as exaggerated perspective and distortion. The minimum shooting distance (just 12in.) and large depth of field also provide exceptional close-up shots.

The KELDA's super multi-layer lens coating reduces flare and ghosting, a common problem with digital cameras. It also creates an optimum colour balance. All in a robust rigid aluminium base frame.

With the removable bayonet lens hood the KELDA 6.5mm f3.5 Fish-eye can be used on FULL FRAME DSLRS

SPECIFICATIONS

Construction:	10 elements in 7 groups
Minimum Focus	1ft./ 0.3m.
Distance: Angle of View:	180deg. diagonal
Dimensions:	4in. / 10cm length
Net Weight:	414gms / 14.6oz
